

FOR IMMEDIATE RELEASE

**INFINET WIRELESS INTRODUCES HIGH-PERFORMANCE  
MIMO BACKHAUL LINKS: COMPLETE INFILINK 2X2™  
PRODUCT LINE FROM FAST ETHERNET TO 300 MBPS**

**Moscow, Russia and Dubai, UAE (March 5, 2008):** Using the CABSAT 2008 exhibition in Dubai as a focal point of customer interest from across the Emerging Markets, InfiNet Wireless, a leading global vendor of Broadband Wireless Access (BWA) solutions, today announced the release of its InfiLINK 2x2 high-performance MIMO product family. Solutions based on the InfiLINK 2x2 family will include a comprehensive range of modules aimed at satisfying the needs of a variety of service providers requiring high-capacity FastEthernet backhaul links for speeds up to 300 Mbps.

The key benefits of the new InfiLINK family combine industry-leading speed-to-range ratios with best-in-class spectral efficiency and feature set. Reaching real throughputs of more than 100 Mbps in just 20 MHz of spectrum and 100 Mbps full-duplex in 40 MHz of spectrum marks a quantum leap in high-speed wireless solutions.

The new InfiLINK range of solutions offers unsurpassed reliability and flexibility to design, build and manage wireless access networks. Whether it is used as a high-capacity longhaul to create remote Internet Points of Presence (POP's), a highly-efficient WiMAX BTS backhauls or just as a traditional transmission backbone for streaming multiple high-quality video streams, the new InfiLINK solution delivers best-in-class performance. "Coupled with our newest extended temperature housing and purpose-built amplifiers and advanced protection from severe weather conditions, the MIMO InfiLINK family of products can be successfully deployed virtually anywhere in the world, irrespective of climatic conditions", said Robert H. Stubblebine, President of InfiNet Wireless Ltd. "Major product deployments in Saudi Arabia, South Africa and Malaysia further underscore these product advantages as telcos and ISP's around the world recognize InfiNet's value proposition."

## **About InfiNet Wireless:**

---

InfiNet Wireless is a leading global vendor of Last Mile connectivity solutions utilizing Fixed Broadband Wireless Access (FBWA), Mesh and emerging WiMAX technologies. InfiNet Wireless' leading-edge routing products represent more than ten years of intense engineering efforts by world-class Russian development laboratories, with extensive field experience in the design and deployment of many hundreds of wireless carrier-class networks. InfiNet Wireless is a member of the WiMAX Forum™ and through international channels and successfully put over 55,000 wireless routers into operation worldwide.

As one of the first companies in the world to pioneer broadband wireless access technologies to create Metropolitan Area Networks, InfiNet Wireless quickly established a clear leadership position in fixed wireless installations in Russia and today maintains a dominant market share with over 40% of all BWA networks. More than 300 carrier-class wireless networks throughout the world have been built with InfiNet routers in Europe, Russia, China, Southeast Asia, the Middle East and the United States. InfiNet Wireless products a distributed around the world by authorized channel partners as listed on the company's web site: <http://www.infinetwireless.com/Company/partners>
